

**GOVERNMENT OF INDIA
MINISTRY OF COMMUNICATIONS
DEPARTMENT OF TELECOMMUNICATIONS**

**RAJYA SABHA
UNSTARRED QUESTION NO. 57
TO BE ANSWERED ON 2ND FEBRUARY, 2024**

5G VERTICAL ENGAGEMENT AND PARTNERSHIP PROGRAM

57 Shri S Niranjan Reddy:

Will the Minister of Communications be pleased to state:

- (a) the details of the 5G Vertical Engagement and Partnership Program that intends to build strong collaboration partnerships across 5G Use-case ecosystem stakeholders;
- (b) the progress made in this regard; and
- (c) the details of other such measures that Government is taking and intends to take for successful deployment of 5G in the country?

ANSWER

**MINISTER OF STATE FOR COMMUNICATIONS
(SHRI DEVUSINH CHAUHAN)**

(a) to (c) The Government is committed to promoting development and manufacturing of telecom technology and products in India, the details of which are as under:

1. Indigenous 4G/5G technology

- In the last few years India has made a huge leap forward towards developing its own telecom stack and in strengthening its solutions especially in the areas of 4G and 5G technologies for the domestic and global market requirements.
- Indigenous 4G/5G telecom stack have been developed and being deployed in Bharat Sanchar Nigam Limited (BSNL) Network.
- The Government is actively fostering partnerships with Indian industry, academia, and startups to spearhead the development of 5G technology within the country.
- Centre for Development of Telematics (C-DoT), an autonomous R&D Centre of DoT, has made progress on the development of Open Radio Access Network (ORAN) compliant 5G equipment, called "BharatRAN". This collaborative effort culminated in the successful development of a prototype 5G Standalone (SA) RAN.
- The Indigenous 5G Test Bed developed through a collaborative effort of eight pioneering institutes of the country and entirely funded by the Government is fully programmable and can be leveraged for Next Phase of Research in 5G Advanced and 6G.
- Indigenously developed 5G systems at IIT Madras have been deployed for testing for 5G Use cases at Military College of Telecommunication Engineering (MCTE), Dr. Ambedkar Nagar. Additionally, a deployment is underway at Indian Railway Institute of Signal Engineering and Telecommunications (IRISET) for the Railways.

2. Indigenous 5G Test Bed

- Government approved a financial grant of Rs. 224 Crore in March 2018 to establish an 'Indigenous 5G Test Bed' in India, recognizing India's specific requirements and aiming to take the lead in 5G deployment.
- The project involved eight collaborating institutes working together on this initiative, including Indian Institute of Technology Madras, Indian Institute of Technology Delhi, Indian Institute of Technology Hyderabad, Indian Institute of Technology Bombay, Indian Institute of Technology Kanpur, Indian Institute of Science Bengaluru, Society for Applied

Microwave Electronics Engineering & Research (SAMEER), and Centre of Excellence in Wireless Technology (CEWiT), Chennai.

- The Indigenous 5G test bed was dedicated to the nation by Hon'ble PM on 17th May 2022.
- The Test Bed is available at five different locations across India and is compliant with the global 3GPP standard and the ORAN standard.
- It provides an end-to-end testing facility, enabling R&D teams in Indian academia and industry to validate their products, prototypes, algorithms, and demonstrate various services.

3. 5G labs

- Government has sanctioned 100 5G labs across the country to develop technologies with an outlay of approx. Rs. 100 Cr.
- These labs will focus on creation of user technologies in sectors such as education, agriculture, health, power, urban management, mining, logistics, resource management, tourism, sports, security, e-governance, etc.

4. Digital Communications Innovation Square (DCIS) Scheme

- For development of indigenous 5G technology and other emerging technologies in communications service sector, DoT is implementing "Digital Communications Innovation Square (DCIS)" Scheme. The scheme is geared towards translation of research into technology (product/process).
- Government has supported more than 96 start-ups/MSMEs till date with Rs. 74.7 Crore as grant-in-aid under this Scheme.

5. Telecom Technology Development Fund (TTDF) Scheme

- Efforts have been undertaken to ensure a cohesive ecosystem for start-ups and MSMEs.
- Towards this end, the Government has launched the Telecom Technology Development Fund (TTDF) Scheme in October 2022, with an annual fund allocation of Rs 500 Crore to fund R&D in rural-specific communication technology applications and form synergies with the industry to develop the telecom ecosystem in India.
- The details of the major projects sanctioned under TTDF are as under:
 - 6G: Tera Hertz (THz) Test bed with Orbital Angular Momentum and Multiplexing.
 - Advance Optical Communications Test Bed.
 - Development of a 100 Gbps hardware based encrypted communication system hub.
 - Gigabit Speed Customer Premise Equipment Radio for Private Networks, Homes and Commercial Buildings.
 - Development of NavIC based Indian Standard Time (IST) traceable Primary Reference Time Clock (PRTC) for telecom sector.

6. Roll-out of 5G in India

5G services were launched in India on 1st October 2022. Within a span of 14 months, more than 4.15 Lakh 5G sites are providing connectivity across 742 districts. This is the fastest roll-out of 5G anywhere in the world.
